# How to Enable cPanel Two-Factor Authentication (2FA) with Google Authenticator?

**Step 1: Log in to cPanel**
Use your cPanel URL: https://yourdomain.com:2083
Sign in with your username and password.

**Step 2: Open Two-Factor Authentication**
Inside cPanel, scroll down to the **Security** section and click: **Two-Factor Authentication**

**Step 3: Click "Set Up Two-Factor Authentication"**
You will see a page with a QR code and a secret key.

**Step 4: Open Google Authenticator on your phone**
If you don't have it, Install it.:

- **Android:** Play Store → search **Google Authenticator**
- **iPhone:** App Store → search **Google Authenticator**

**Step 5: Add your cPanel account**
Inside Google Authenticator:

- Tap **+** then Choose **Scan a QR Code**
- Scan the QR code shown in cPanel

Alternatively, you can enter the secret key manually. This will add a 6-digit rotating code for your cPanel login.

**Step 6: Confirm the setup**
Back in cPanel, enter the 6-digit code shown in Google Authenticator.
Then click **Configure**.

**Step 7: Done**
You will now use:

- **Your cPanel password**
- **+ the 6-digit code** from Google Authenticator

every time you log in.
